

VOMITEB

A study to evaluate the efficacy of polyherbal anti-emetic (Vomiteb) tablets in treatment of NVP (nausea and vomiting in pregnancy)

An open label, prospective clinical trial was conducted by Dr. Alka Godbole at private clinic in Mumbai, on 45 females of reproductive age (20 years and older) with singleton pregnancy of less than 7 weeks gestation who previously carried a full term pregnancy and had a history of severe NVP in previous pregnancy. Vomiteb tablet was administered as 2 tablets at night and 1 tablet in morning for two weeks.

All 45 enrolled patients exhibited an excellent compliance and tolerability to the study drug with no reporting of adverse effects.
